FairChild Institute

Cybersecurity & Data Institute

FairChild Institute

Month 1

Cybersecurity & Digital Systems Foundations

Duration 4 weeks

Month Journey

Week 1 — Cybersecurity principles and professional ethics

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Build an asset–threat–control map for a fictional SME.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 2 — Hardware, Windows and Linux fundamentals

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Inspect users, permissions, processes and updates in a sandbox.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 3 — Networking, TCP/IP, DNS and HTTP(S)

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Interpret a safe packet capture and draw a network topology.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 4 — Security controls and baseline assessment

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Submit a baseline checklist and prioritised improvement plan.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

FairChild Institute

Month 2

Networks, Identity & System Security

Duration	4 weeks

Month Journey

Week 1 — Network segmentation, firewalls and secure connectivity

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Draft network zones and a firewall rules review.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 2 — Identity, authentication, MFA and least privilege

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Prepare a role-based access matrix and review exceptions.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 3 — Endpoint hardening, patching and configuration

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Compare two device baselines and record gaps.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 4 — Cloud shared responsibility and access security

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Review a fictional cloud configuration against a checklist.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

FairChild Institute

Month 3

Security Risk, Vulnerabilities & Data Protection

Duration 4 weeks

Month Journey

Week 1 — Threat modelling and attack surface identification

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Create a basic threat model for an online service.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 2 — Vulnerability severity, CVSS and prioritisation

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Rank supplied findings by severity and business context.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 3 — Data classification, privacy and encryption

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Create a data inventory and handling matrix.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 4 — Security awareness and business continuity

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Design a phishing awareness brief and recovery tabletop.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

FairChild Institute

Month 4

Cybersecurity Governance & Frameworks

Duration 4 weeks

Month Journey

Week 1 — Governance, accountability and risk appetite

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Develop a cyber governance RACI and risk appetite note.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 2 — NIST Cybersecurity Framework 2.0

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Map five business risks to CSF functions and outcomes.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 3 — ISO/IEC 27001 and ISMS fundamentals

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Define a sample ISMS scope and key processes.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 4 — CIS Controls, COBIT and framework mapping

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Prepare a control crosswalk and identify overlaps.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

FairChild Institute

Month 5

Risk Assessment & Security Policies

Duration	4 weeks

Month Journey

Week 1 — Risk identification, likelihood and impact

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Build a risk register with defined scoring criteria.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 2 — Risk treatment, residual risk and acceptance

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Create a treatment plan with owners and deadlines.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 3 — Risk treatment, residual risk and acceptance

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Draft access control and acceptable-use policies.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 4 — Security policies, standards and procedures

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Assess evidence for selected controls and write a gap log.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

FairChild Institute

Month 6

Compliance, Audit & Third-Party Risk

Duration 4 weeks

Month Journey

Week 1 — Privacy obligations and regulatory scoping

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Prepare a requirements matrix; discuss Nigeria Data Protection Act and GDPR applicability.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 2 — Audit planning, sampling and evidence

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Write a control test plan and sample workpapers.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 3 — Third-party due diligence and supplier risk

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Review a vendor questionnaire and assign risk tiers.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 4 — Findings, remediation and executive reporting

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Present audit findings with risk-rated actions.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

FairChild Institute

Month 7

SOC Operations & Security Monitoring

Duration 4 weeks

Month Journey

Week 1 — SOC operating models, roles and escalation

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Map Tier 1 workflow and escalation thresholds.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 2 — Log sources: network, Windows, Linux and cloud

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Classify a provided event dataset by source and relevance.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 3 — SIEM architecture and search basics

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Ingest synthetic logs into an authorised SIEM lab.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 4 — Alert triage, false positives and ticketing

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Investigate simulated alerts and document dispositions.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

FairChild Institute

Month 8

Threat Intelligence & Security Investigation

Duration 4 weeks

Month Journey

Week 1 — Indicators, observables and intelligence quality

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Enrich fictional indicators and record confidence.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 2 — MITRE ATT&CK and adversary behaviour

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Map a simulated incident to tactics and techniques.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 3 — Phishing and account compromise investigation

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Build a case timeline from supplied email and login events.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 4 — Cross-source correlation and escalation

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Write an evidence-backed analyst escalation report.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

FairChild Institute

Month 9

Incident Response, EDR & Forensic Readiness

Duration 4 weeks

Month Journey

Week 1 — Incident lifecycle, severity and response playbooks

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Draft a response playbook and decision tree.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 2 — Endpoint detection and response concepts

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Review synthetic endpoint telemetry for suspicious patterns.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 3 — Containment, recovery and stakeholder communications

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Run a simulated containment decision exercise.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 4 — Evidence integrity, timelines and lessons learned

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Produce an incident report and post-incident actions.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

FairChild Institute

Month 10

Detection Engineering & Threat Hunting

Duration 4 weeks

Month Journey

Week 1 — Detection logic, SIEM queries and Sigma awareness

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Write and explain a rule against synthetic telemetry.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 2 — Detection testing, tuning and quality

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** learners through a controlled demonstration.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 3 — Hypothesis-led threat hunting

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Conduct a hunt against a prepared dataset.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 4 — SOC performance metrics and reporting

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Build an MTTD/MTTR and alert-quality dashboard.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

FairChild Institute

Month 11

Integrated Cybersecurity Operations & Career Credentials

Duration	4 weeks

Month Journey

Week 1 — Linking SOC findings to enterprise risk

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Translate an incident into a risk register update.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 2 — Linking governance controls to detection evidence

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Map monitoring evidence to ISO/NIST control expectations.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 3 — Excel/Power BI cyber risk and SOC reporting

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Build a combined executive cyber posture dashboard.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 4 — Certification review and mock client briefing

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Complete scenario-based review and a stakeholder presentation.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

FairChild Institute

Month 11

Enterprise Cybersecurity Capstone & Professional Practice

Duration 4 weeks

Month Journey

Week 1 — Client discovery, asset scoping and assessment plan

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Submit scope, assumptions, requirements and ethical rules.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 2 — Risk assessment, policy and monitoring implementation

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Produce control map, risk register and monitoring evidence.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 3 — Incident simulation, audit review and remediation

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Demonstrate triage, response and control validation.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).

Week 4 — Portfolio, executive presentation and viva

- **Learning objectives:** Define the core concepts and operational purpose; identify dependencies, risks and limitations; choose and justify a proportionate approach to the scenario.
- **Mentor delivery:** Introduce a realistic business or incident scenario, model the reasoning and method, then coach learners through a controlled demonstration.
- **Practical exercise:** Defend findings, trade-offs, remediation and next steps.
- **Submission and validation:** Provide a working artefact or completed template, screenshots or anonymised evidence as relevant, a short rationale, and a verification checklist.
- **Time:** 30–40 min instruction; 60–90 min guided practice; 30–50 min review and feedback (2–3 hours).
