FairChild Institute

Marketing Technology Institute

FairChild Institute

Month 1

Marketing Cloud Foundations & Administration

Duration	4 weeks

Month Journey

Week 1: Platform architecture, business units, roles and permissions

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Completed build or design, screenshots/logs or test results, a short technical explanation, and a reflection on limitations and next steps.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 2: Sender authentication, deliverability and sending infrastructure

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 3: Contact keys, subscriber records, data extensions and primary keys

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Completed build or design, screenshots/logs or test results, a short technical explanation, and a reflection on limitations and next steps.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 4: Email Studio, Content Builder, first campaign send

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

FairChild Institute

Month 2

Contact Architecture & CloudPages

Duration 4 weeks

Month Journey

Week 1: Contact Builder, attribute groups and relationships

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Completed build or design, screenshots/logs or test results, a short technical explanation, and a reflection on limitations and next steps.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 2: Data Designer, cardinality and data modelling

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 3: CloudPages landing pages, forms and data capture

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Completed build or design, screenshots/logs or test results, a short technical explanation, and a reflection on limitations and next steps.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 4: Consent, preference management and triggered interactions

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

FairChild Institute

Month 3

Automation Studio & SQL Segmentation

Duration 4 weeks

Month Journey

Week 1: Automation Studio activities and dependencies

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Completed build or design, screenshots/logs or test results, a short technical explanation, and a reflection on limitations and next steps.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 2: SQL Query Activities and audience segmentation

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 3: File imports/exports, SFTP concepts and validation

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Completed build or design, screenshots/logs or test results, a short technical explanation, and a reflection on limitations and next steps.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 4: Automation-to-Journey Builder hand-off and monitoring

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

FairChild Institute

Month 4

Journey Builder & Campaign Operations

Duration 4 weeks

Month Journey

Week 1: Entry sources, splits, waits, exits and journey goals

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Completed build or design, screenshots/logs or test results, a short technical explanation, and a reflection on limitations and next steps.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 2: Advanced personalisation, dynamic content and versioning

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 3: Integrated campaign design, governance and troubleshooting

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Completed build or design, screenshots/logs or test results, a short technical explanation, and a reflection on limitations and next steps.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 4: Phase 1 capstone: end-to-end customer engagement campaign

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

FairChild Institute

Month 5

AMPscript & Dynamic Content

Duration	4 weeks

Month Journey

Week 1: Development tools, AMPscript syntax, variables and functions

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Completed build or design, screenshots/logs or test results, a short technical explanation, and a reflection on limitations and next steps.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 2: Lookups, conditional logic and reusable personalisation

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 3: Email dynamic content, fallback handling and QA

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Completed build or design, screenshots/logs or test results, a short technical explanation, and a reflection on limitations and next steps.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 4: Advanced AMPscript applied build and peer review

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

FairChild Institute

Month 6

CloudPages & Server-Side JavaScript

Duration 4 weeks

Month Journey

Week 1: CloudPages forms, validation and secure data capture

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Completed build or design, screenshots/logs or test results, a short technical explanation, and a reflection on limitations and next steps.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 2: SSJS syntax, platform objects and data operations

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 3: AMPscript and SSJS combined patterns and debugging

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Completed build or design, screenshots/logs or test results, a short technical explanation, and a reflection on limitations and next steps.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 4: Triggered messaging, transactional scenarios and test cases

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

FairChild Institute

Month 7

APIs & External Integrations

Duration	4 weeks

Month Journey

Week 1: REST fundamentals, OAuth concepts and Postman testing

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Completed build or design, screenshots/logs or test results, a short technical explanation, and a reflection on limitations and next steps.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 2: REST/SOAP operations, error responses and API limits

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 3: Event-driven integration, webhooks and monitoring

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Completed build or design, screenshots/logs or test results, a short technical explanation, and a reflection on limitations and next steps.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 4: Integration security, resilience and technical documentation

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

FairChild Institute

Month 8

Advanced Marketing Cloud Engineering

Duration 4 weeks

Month Journey

Week 1: Developer-oriented automation and Journey Builder patterns

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Completed build or design, screenshots/logs or test results, a short technical explanation, and a reflection on limitations and next steps.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 2: Code/configuration quality, testing and deployment controls

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 3: Solution architecture, performance and operational handover

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Completed build or design, screenshots/logs or test results, a short technical explanation, and a reflection on limitations and next steps.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 4: Phase 2 capstone: technically extended Marketing Cloud solution

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

FairChild Institute

Month 9

Data Cloud Foundations & Ingestion

Duration 4 weeks

Month Journey

Week 1: Data Cloud architecture, objects and customer data lifecycle

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Completed build or design, screenshots/logs or test results, a short technical explanation, and a reflection on limitations and next steps.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 2: Data sources, connectors, data streams and ingestion

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 3: Data Model Objects, relationships and field mapping

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Completed build or design, screenshots/logs or test results, a short technical explanation, and a reflection on limitations and next steps.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 4: Data transformations, profiling and data quality rules

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

FairChild Institute

Month 10

Identity Resolution & Insights

Duration 4 weeks

Month Journey

Week 1: Identity resolution: Matching and reconciliation

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Completed build or design, screenshots/logs or test results, a short technical explanation, and a reflection on limitations and next steps.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 2: Unified individual profiles and validation

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 3: Calculated insights, measures and derived attributes

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Completed build or design, screenshots/logs or test results, a short technical explanation, and a reflection on limitations and next steps.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 4: Data quality exceptions, reconciliation and governance

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

FairChild Institute

Month 11

Segmentation, Activation & Journeys

Duration	4 weeks

Month Journey

Week 1: Audience segmentation and segment validation

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Completed build or design, screenshots/logs or test results, a short technical explanation, and a reflection on limitations and next steps.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 2: Activation to Marketing Cloud and destination readiness

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 3: Data Cloud-powered journeys and personalisation

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Completed build or design, screenshots/logs or test results, a short technical explanation, and a reflection on limitations and next steps.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 4: Activation troubleshooting, consent and access governance

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

FairChild Institute

Month 12

Enterprise Solution & Professional Readiness

Duration	4 weeks

Month Journey

Integrated data-to-activation solution architecture

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Completed build or design, screenshots/logs or test results, a short technical explanation, and a reflection on limitations and next steps.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 2: End-to-end build, testing and evidence collection

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 3: Certification review, portfolio documentation and mock interview

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Completed build or design, screenshots/logs or test results, a short technical explanation, and a reflection on limitations and next steps.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.

Week 4: Phase 3 capstone: final demonstration and professional presentation

- **Instruction:** Introduce terminology and relevant platform concepts; demonstrate a realistic business scenario; identify dependencies, assumptions, risks and expected outputs.
- **Guided lab:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Weekly evidence:** Configure or prototype the relevant feature with a sample dataset; capture settings, source code or query logic as appropriate; verify records, permissions, behaviour and results.
- **Independent challenge:** Modify the solution for a new requirement, diagnose a deliberate fault, document root cause and justify the chosen approach.
